

APM-DT

Site Reliability Engineering (SRE) Training Program – High Level TOC – 200 Hours

1. Introduction & Foundations

1. What is SRE? History, Definition & Role
2. SRE vs DevOps vs Traditional Ops
3. Reliability, Observability, Resilience & Risk
4. Key Terminologies: SLIs, SLOs, SLAs, Error Budgets etc.
5. Deep dive into Real World Projects.

2. Core Engineering & Automation Skills

1. Linux & System Fundamentals
2. Networking & Troubleshooting Skills
3. Shell Scripting & CLI Tools
4. Version Control (Git)
5. Programming for Reliability (Python)

3. Cloud & Infrastructure

1. Cloud Fundamentals & Services (AWS)
2. Containerization & Orchestration (Docker, Kubernetes)
3. Infrastructure as Code & Configuration Management (Ansible, Terraform etc.)

4. CI/CD, Deployment Best Practices & DevSecOps

1. Principles of CI/CD & Deployment Strategies (Canary, Blue-Green, Rolling, etc.)
2. Source Control Best Practices (GitHub, GitLab etc.)
3. Tools & Pipelines (Jenkins, ArgoCD, GitLab CI etc.)

5. Observability & Monitoring

1. Monitoring Fundamentals: Metrics, Logs, Traces
2. Alerting & Notification Mechanisms
3. Dashboarding & Visualizations (Grafana etc.)
4. Advanced Observability & APM Tools (Dynatrace etc.)
5. Deep dive into Data Ingestion & Open Telemetry.

6. Site Reliability Engineering & Best Practices

1. SRE Culture & Practices, Collaboration, Stakeholder Alignment
2. Embedding SRE in Teams & Organizations
3. Eliminating Toil & Automating Mundane Work
4. Incident Management: Detection, Response, Postmortems
5. Load, Capacity & Performance Planning
6. Chaos Engineering / Failure Testing.
7. Processes & Governance (change management, release governance, etc.)

7. Interview Preparation & Career Guidance

1. DevOps & SRE Interview Questions
2. Mock Interviews with Industry experts & Feedbacks

Note: Each session includes interactive live labs with lifetime access to recordings for future reference.
